Senior Product Designer — UX

Portfolio: abhishekipathik.com

Senior Product Designer with 6+ years designing consumer and real-money gaming products end-to-end, from 0-to-1 platforms to full-system redesigns grounded in user research and usage data. Comfortable owning ambiguous problems independently, translating research into information architecture and interaction design, and partnering closely with engineering, product, and legal/compliance stakeholders. Designs, codes, and ships my own portfolio and case-study site from scratch, using AI tools as part of the design-to-code workflow.

EXPERIENCE

Senior Product Designer — Junglee Games

Nov 2023 – Sep 2026 · Gurugram, India

(Product Designer, Nov 2021 – 2023)

- **Rafflee — 0-to-1 UK prize-draw platform:** Sole product designer taking Rafflee from concept to launch (Nov 2025) across web, mobile web, and app. Designed the full experience — account management, draw browsing, ticket checkout, and Rafflee+ subscriptions — and built trust-by-design patterns (free postal entry, guaranteed-giveaway messaging, visible spend limits) to meet UK prize-competition regulatory requirements.
- **Rafflee design system, AI-assisted:** Built the design system from scratch with AI as part of the workflow — used it to research design-system rationale and best practices, and to generate first-pass tokens and component specs, then refined and assembled them into a working system in Figma.
- **Junglee Poker Desktop — 0-to-1:** Independently led end-to-end design and UX solutioning for the desktop application, taking it from initial concept to a fully realized, shipped product.
- **Poker game table redesign:** Ran research (surveys, in-game feedback, stakeholder input) and competitive benchmarking against Natural8 and PokerBaazi to identify five key attention priorities (cards, pot, bets, chip stacks, usernames); applied Gestalt grouping, Fitts's Law, and Hick's Law to simplify the table and its core Fold/Call/Raise actions, reducing clutter and cognitive load.
- **Poker lobby redesign:** Led 12 user interviews plus a 3-month usage-data analysis that surfaced a 17% first-session drop-off and a 2m10s average time-to-first-game; redesigned navigation into five clear game categories and surfaced buy-ins, blinds, and trust signals (legal FAQ, secure-platform badge) directly on table cards, targeting faster, more confident game selection for new and returning players.
- Executed the migration and India launch of PokerStars within a tight deadline; engaged directly with players across Rummy, Poker, and PokerStars to translate feedback into shipped usability improvements.

EXPERIENCE, CONTINUED

UX Designer — To The New

Aug 2019 – Nov 2021 · Noida, India

- Directed UX/UI for Lumi Car Rental Services (Riyadh), using user feedback and market research to design an intuitive booking interface for a new market.
- Led the visual and UX redesign of the Tata Broadband and Dainik Bhaskar websites, and worked directly with government stakeholders to design the Invest India site — translating official requirements into a user-centric, engagement-focused interface.
- Ran usability testing and competitive analysis across projects, documenting flaws and proposing fixes, and used analytics and KPIs to guide design decisions in partnership with development teams.

Character Artist — Maya Digital Studios (P) Ltd.

May 2018 – Aug 2019 · Mumbai, India

- Designed characters and created assets for Nickelodeon India series (Motu Patlu, Shiva); collaborated with a team in Italy on character storyboarding and asset animation for international shows (Leo Da Vinci, Cooties).

INDEPENDENT PROJECT

Personal Portfolio Website — designed & built from scratch

2026

- Designed the site and built it with Claude AI as coding partner — HTML, CSS, and vanilla JavaScript (no framework) — to present UX work as process (framing, research, iteration, reasoning), not just final screens.
- Built a hidden "bug hunt" mini-game Easter egg: the avatar is rendered at a constant scale across 24 fixed angles and mapped to cursor position in real time, so it visibly turns to track the cursor.

EDUCATION

Advanced Program in Digital Media & Design (APDMD) — Maya Academy of Advanced Cinematics

03/2017 – 04/2018

Master of Technology (MTech), Computer Software Engineering — Gautam Buddha University

01/2012 – 01/2017

Bachelor of Technology (BTech), Computer Science — Gautam Buddha University 01/2012 – 01/2017

CORE STRENGTHS

0-to-1 product design · UX research & usability testing · information architecture & navigation design · interaction & visual design · design systems thinking · AI-augmented design workflow · cross-functional collaboration (product, engineering, legal/compliance) · **front-end prototyping** (HTML/CSS/JavaScript)
